# GitHub workflows: Fork & Pull model

"The fork & pull model lets anyone fork an existing repository and push changes to their personal fork without requiring access be granted to the source repository.

The changes must then be pulled into the source repository by the project maintainer.

This model reduces the amount of friction for new contributors and is popular with open source projects because it allows people to work independently without upfront coordination."

Create a New Repository

GitHub, Inc. [US] https://github.com/organizations/lhs...

Search or type a command | Explore | Gist | Blog | Help | gnarlinsky

Create main repo

PUBLIC

**Owner** lhstudios / **Repository name** fun example repo

Will be created as fun-example-repo

Great repository names are short and memorable. Need inspiration? How about **miniature-octo-wookie**.

**Description** (optional)

**Public**
Anyone can see this repository. You choose who can commit.

**Private**
You choose who can see and commit to this repository.

**Initialize this repository with a README**
This will allow you to `git clone` the repository immediately. Skip this step if you have already run `git init` locally.

Add .gitignore: **None** | Add a license: **None**

**Create repository**

**intramigo** commented 10 minutes ago

(A silly update made in Github itself.)

`Updated hello string (lhstudios/fun-example-repo/#1)` ··· 4145a21

**gnarlinsky** commented on `4145a21 hello.py:L3` 2 minutes ago | Owner

Looks good!

**gnarlinsky** merged commit `ff67d22` into `lhstudios:master` from `intramigo:master` just now
